

NOAA

GOES-R and GEO-XO Program Update

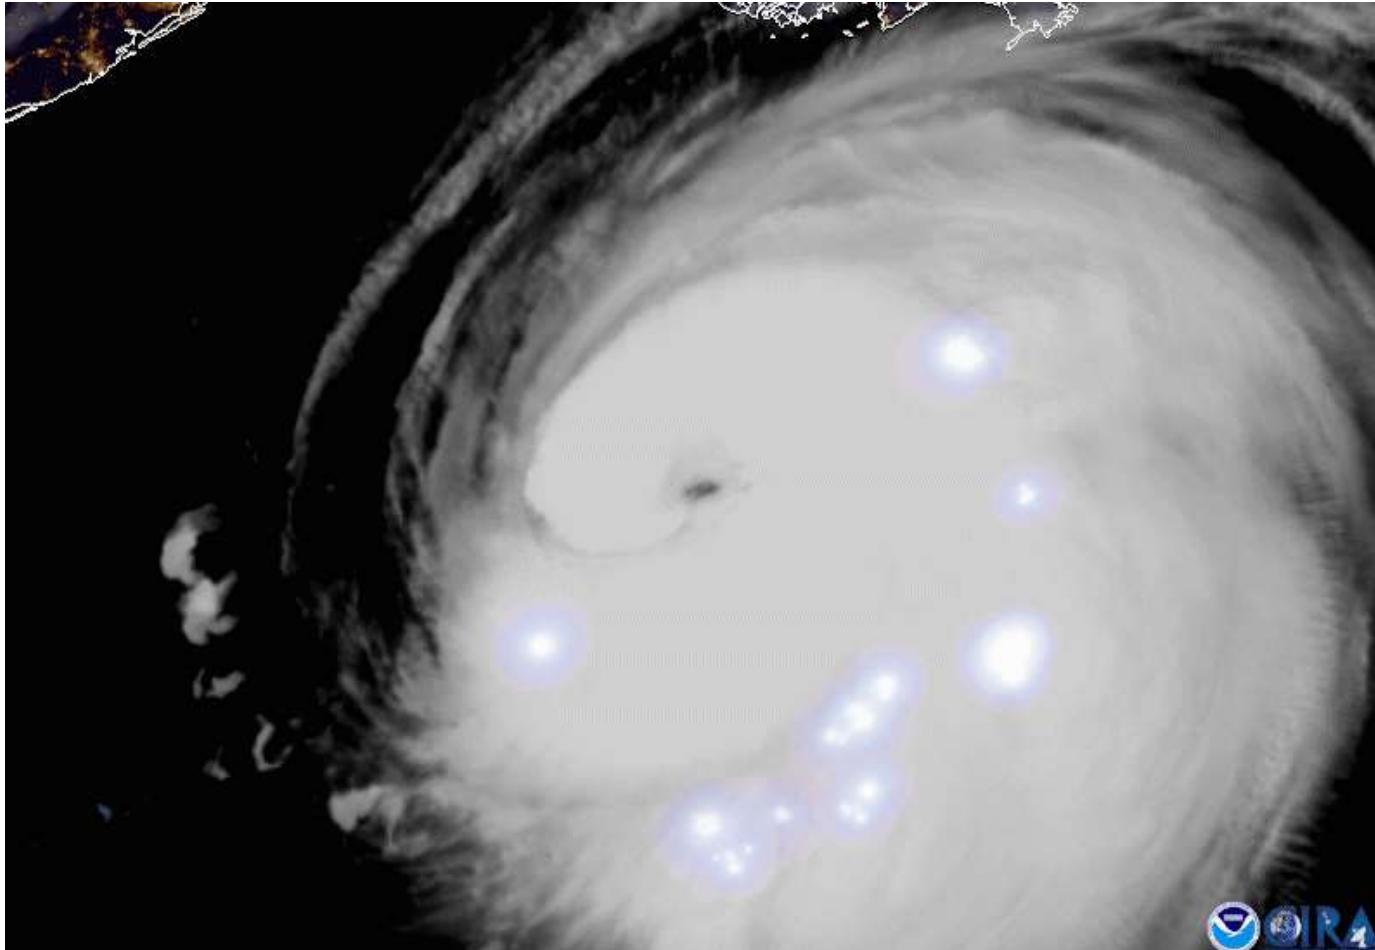

Dan Lindsey, Program Scientist and Pam Sullivan, Program Director

September 8, 2020

GOES-16 and GOES-17 GLM

- Data are stable and providing reliable lightning information to users
- GLM has gotten a good bit of public exposure with some big weather events lately, including this animation from Hurricane Laura
- This animation got over 20,000 shares from various news outlets across Twitter and Facebook

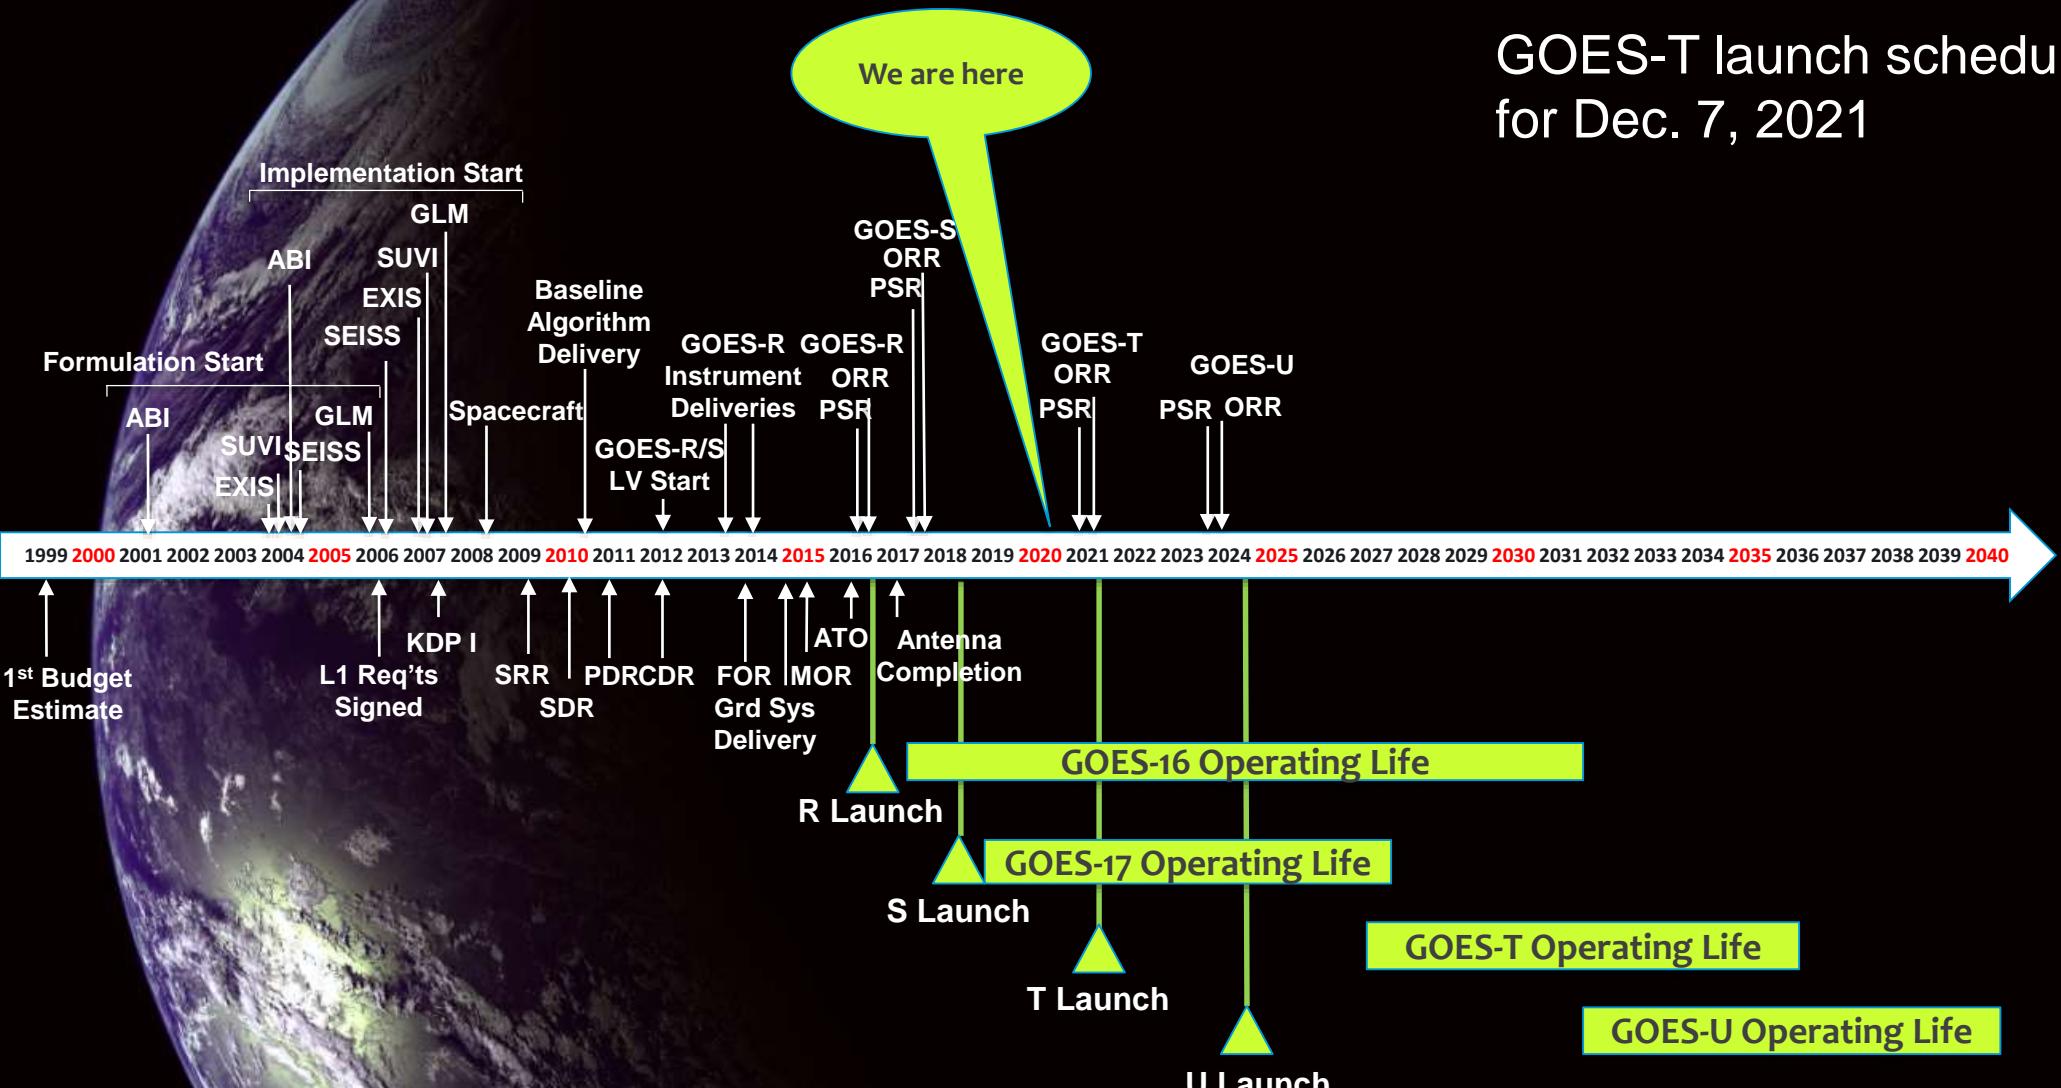

GOES-16 and GOES-17 GLM

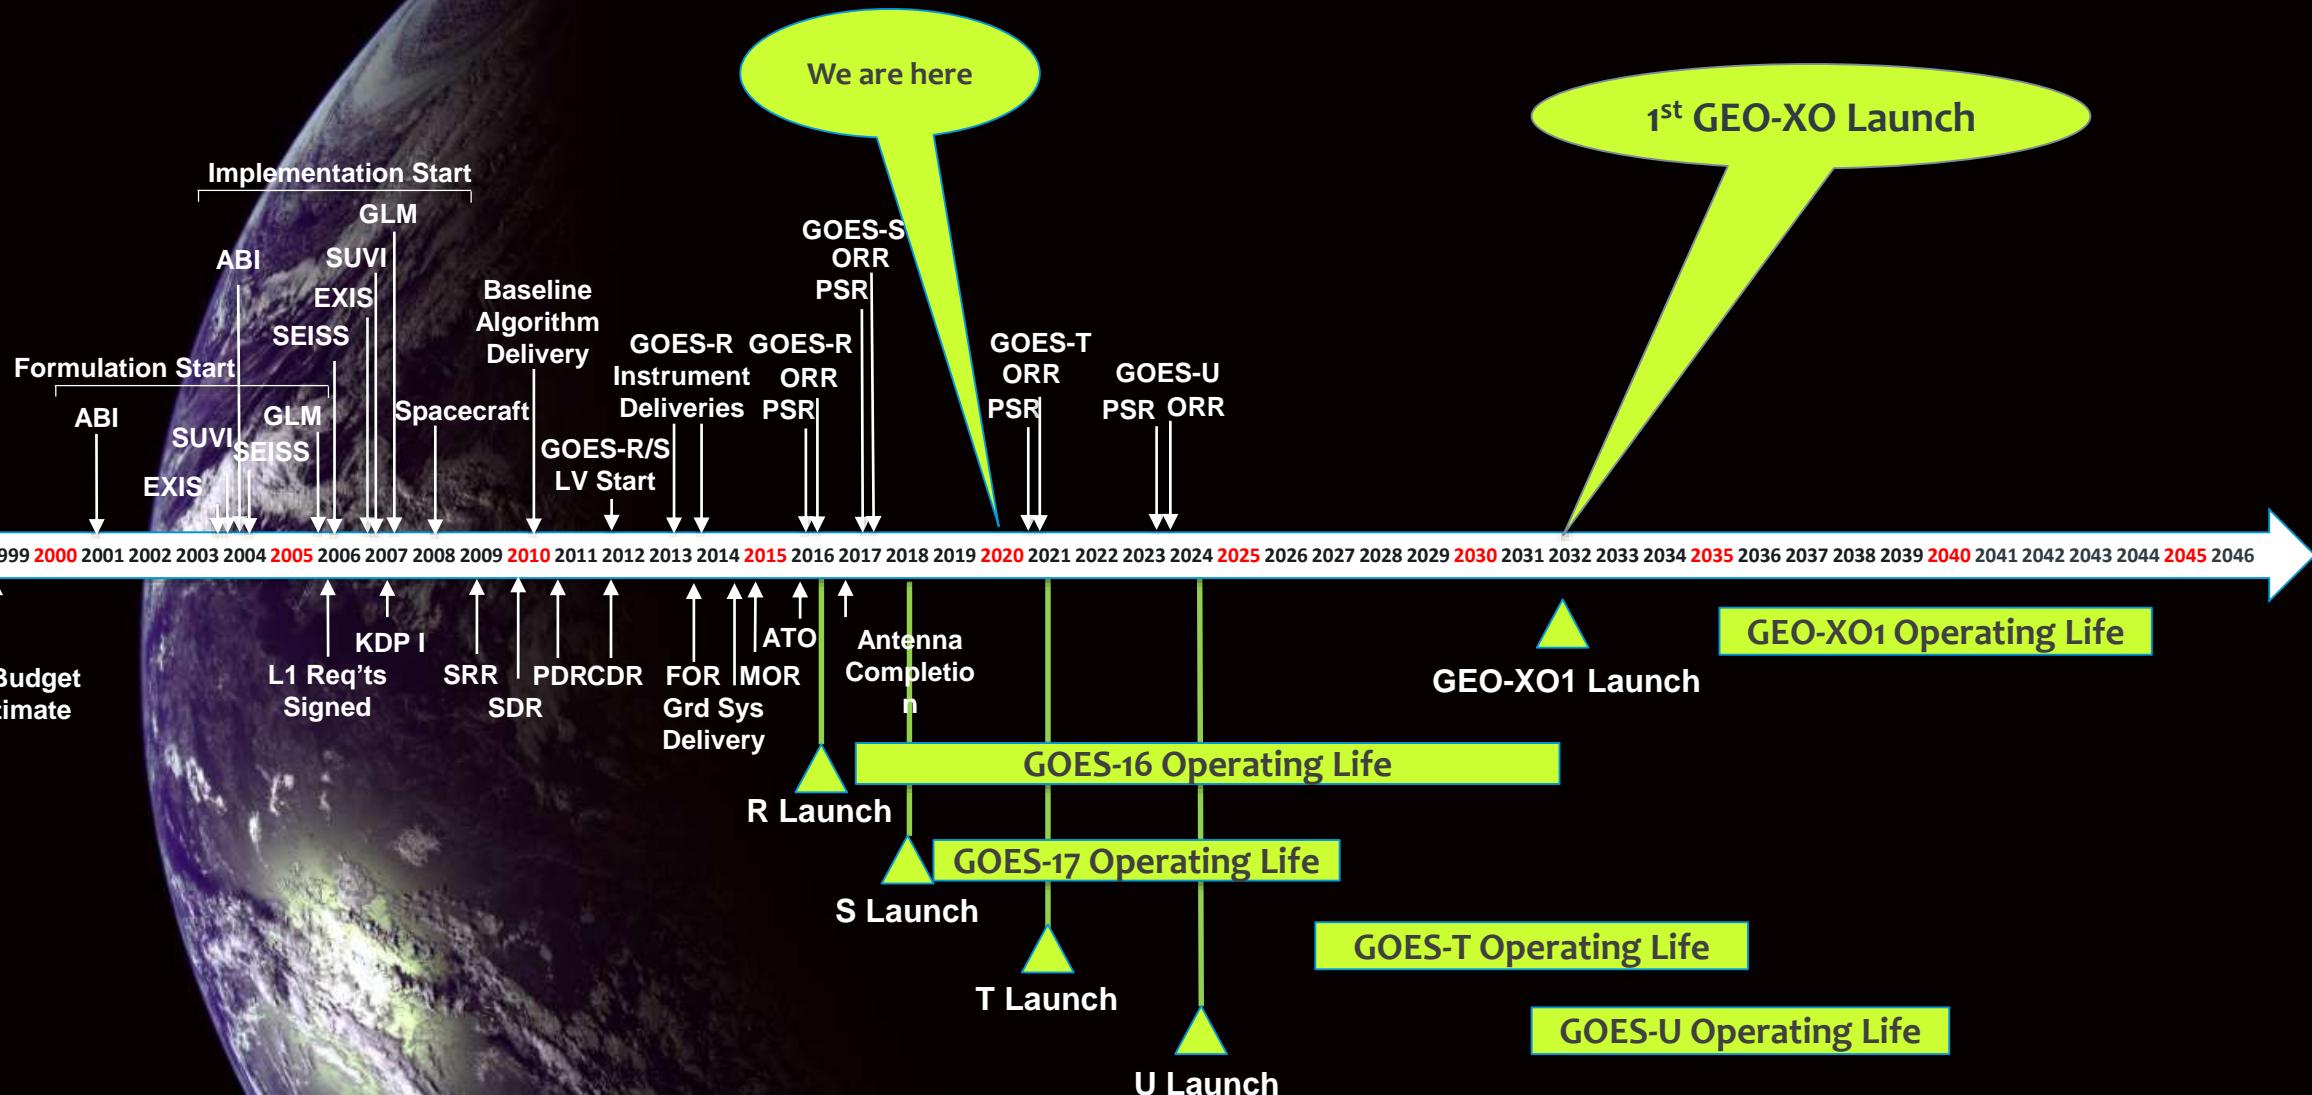

GOES-R Program Timeline

GOES-T launch scheduled for Dec. 7, 2021

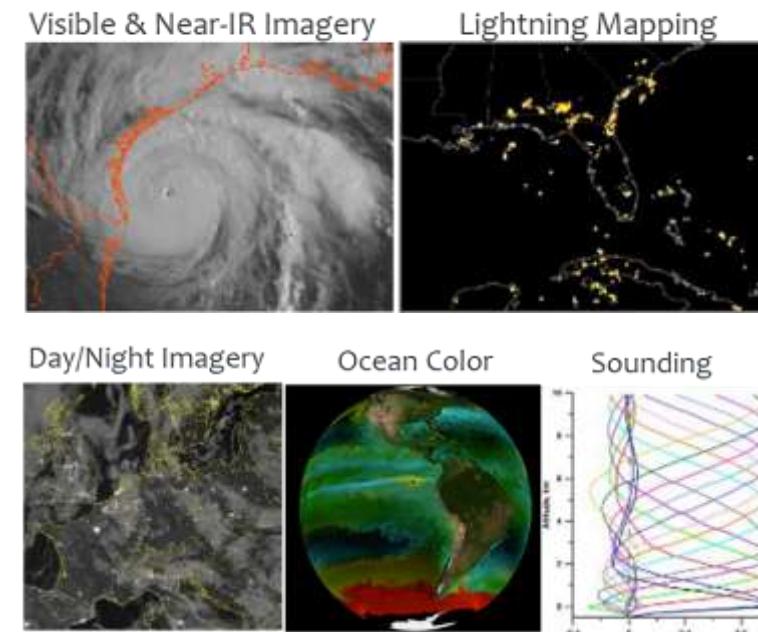

GOES-R Program Timeline

What is GEO-XO?

- GEO-XO = Geostationary and Extended Orbits
 - The mission to follow GOES-R and provide continuity for GEO observations
 - Considering expanding to include observations from “Tundra”
 - Anticipate providing services for Space Weather mission including L1 spacecraft
- GEO-XO includes all NOAA Earth-observing assets deployed above LEO:
 - Government spacecraft
 - Instruments or payloads hosted on commercial/partner spacecraft
 - Potential use of commercial services and observational data
- Operational in the 2030-2050 timeframe
 - Currently in pre-formulation:
 - Instrument and constellation studies underway
 - User needs assessment underway
 - Requirements definition underway
 - Approximate Program Schedule
 - Mission Concept Review, 2021
 - System Requirements Review, 2022
 - System Preliminary Design Review, 2025
 - 1st GEO Launch FY32

Data Continuity, and Potential New Observations

GEO-XO User Requirements Working Group (XORWG)

- Chartered by NESDIS for the purpose of recommending a set of prioritized observational requirements for GEO-XO Program

Lead: NESDIS/GEO Scientist
Co-Lead: NWS/Office of Observations

- User Coordination, Data Services**
- NESDIS/GEO-XO [User Eng Lead]*
 - NESDIS/OSAAP [Reqs Process]
 - NESDIS/OSPO [Data Ops/Distribution]*
 - NESDIS/NCEI [Data Archive/Steward.]*
 - OFCM [US Gov't Users & Applications]*
 - NESDIS/IIA [Internat'l Users & Apps]*
 - NASA/GOES-R Sci [GOES-R Sys & R2O]*
 - NOAA/SSD [Economic Analysis]*
 - GEO-XO Systems Engr [Reqs Process]*
 - NESDIS/OPPA/TPIO [User Surveys]*
 - NESDIS/NCEI [User Outreach]*
 - CIRA [Exploratory Research & Applications]*
 - CIMSS [Exploratory Research & Applications]*
 - CISESS [Exploratory Research & Applications]*

Numerical Weather Prediction

- NESDIS/STAR[Research & Analysis]
- NWS/NCEP [Data Assimilation]
- OAR [EPIC, Data Assimilation]

Weather & Earth Observations

- NESDIS/GOES-R [GOES Users/System]
- NWS [NWS Users & Applications]
- NOS [NOS Users & Applications]
- NMFS [NMFS Users & Applications]
- NESDIS/STAR [Research & Analysis, Algorithms]
- OAR [Research & Applications]

*Associate members will assist in the facilitation of the WG process but will be non-voting members

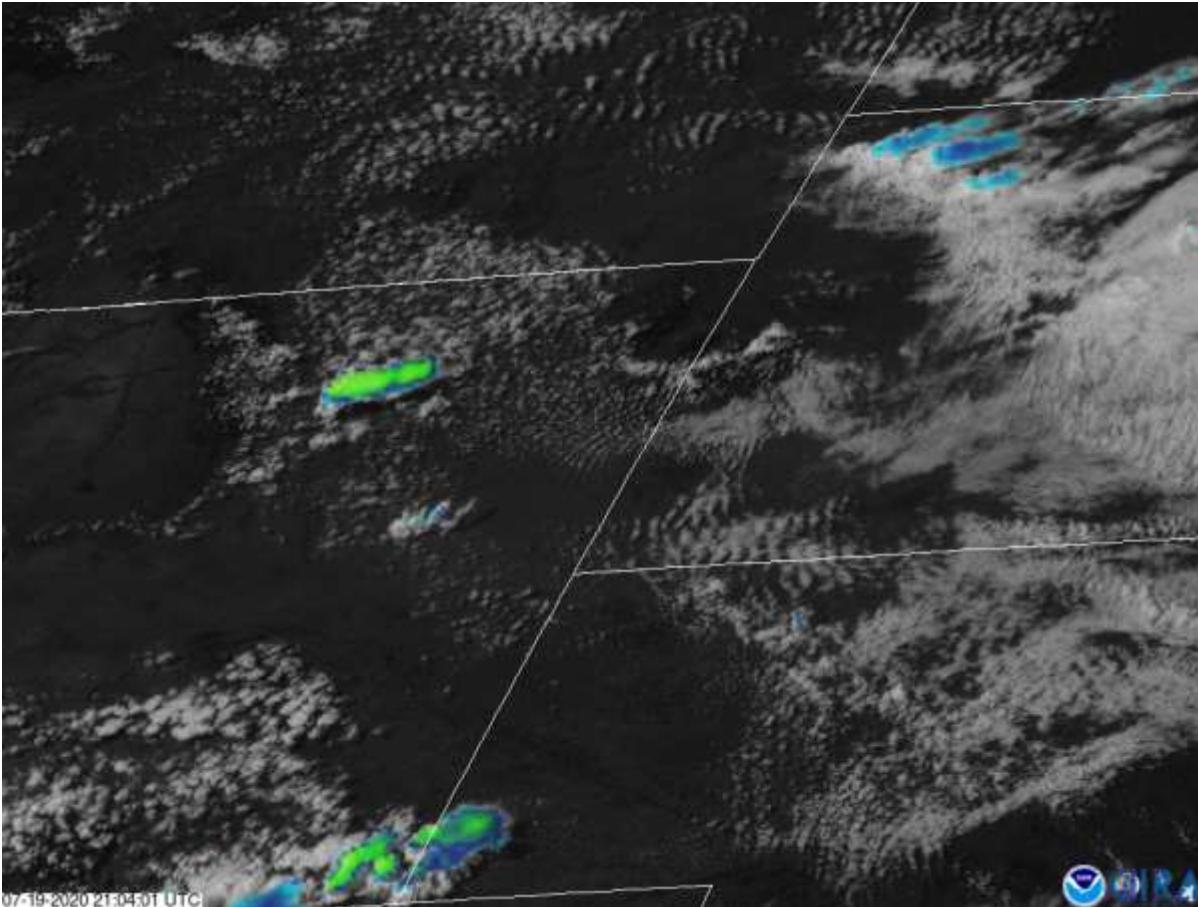

GEO-XO Instruments and orbits under consideration

1. Imager in Geostationary Orbit

- Continuing in the GOES-East and –West positions
- Likely at least ABI quality with some potential upgrades being studied, including:

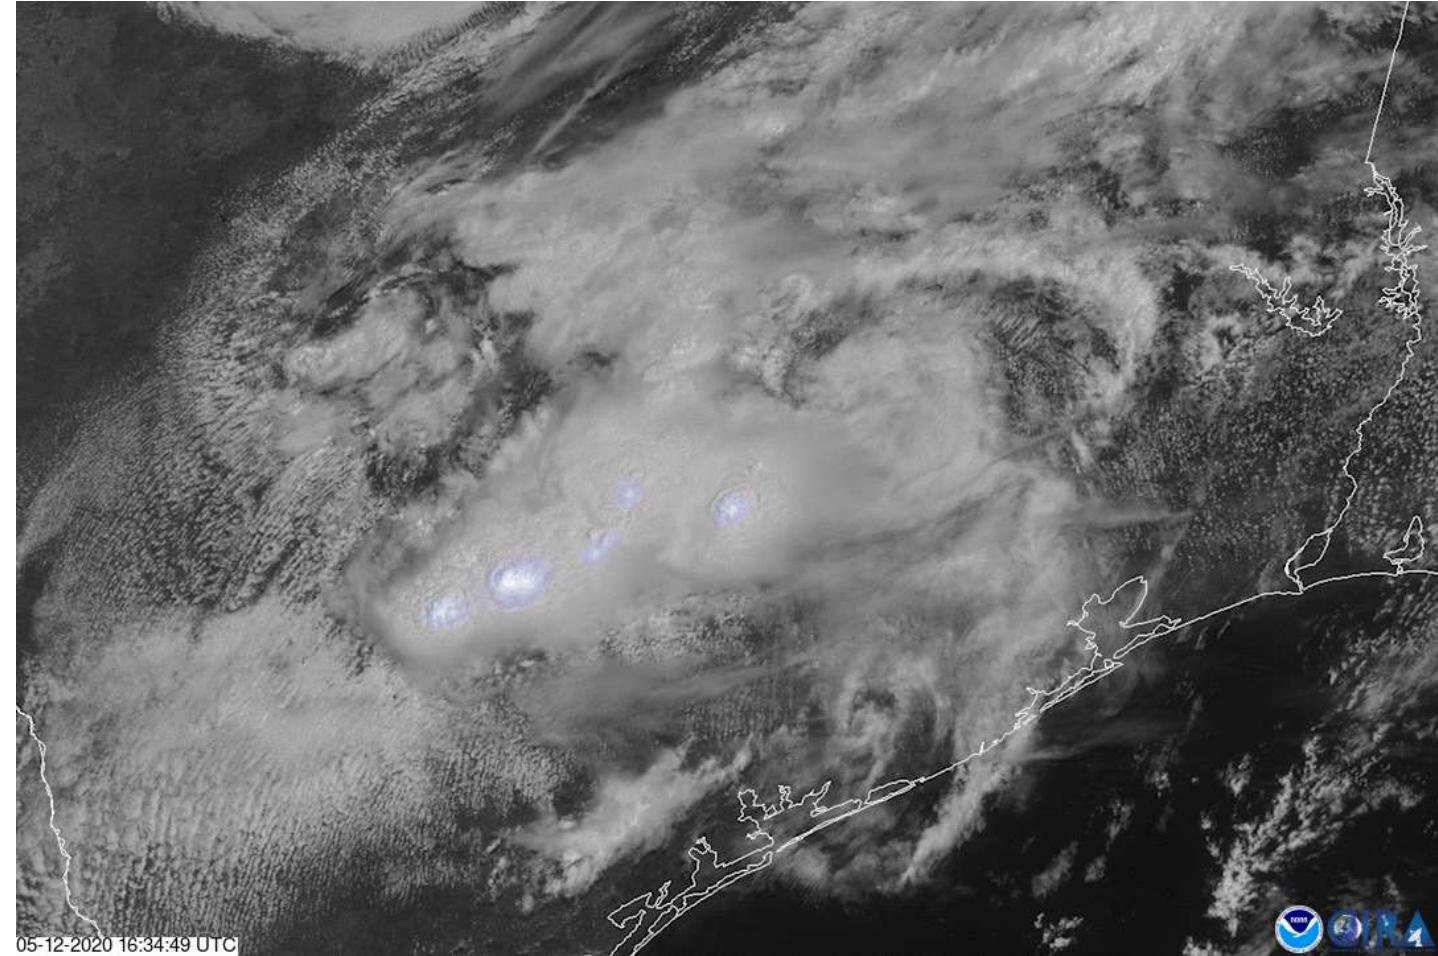

- Improved resolution to the $3.9\text{ }\mu\text{m}$ channel to allow for earlier detection of smaller fires
- Improved resolution to the $0.64\text{ }\mu\text{m}$ VIS band which might help with pre-storm mesoanalysis
- Additional spectral channels such as a $0.9\text{ }\mu\text{m}$ band to help with low-level water vapor and a green band for true true color

GEO-XO Instruments and orbits under consideration

2. Lightning Mapper in Geostationary Orbit

- May be a GLM-like instrument or potentially upgraded lightning mapper with higher spatial resolution

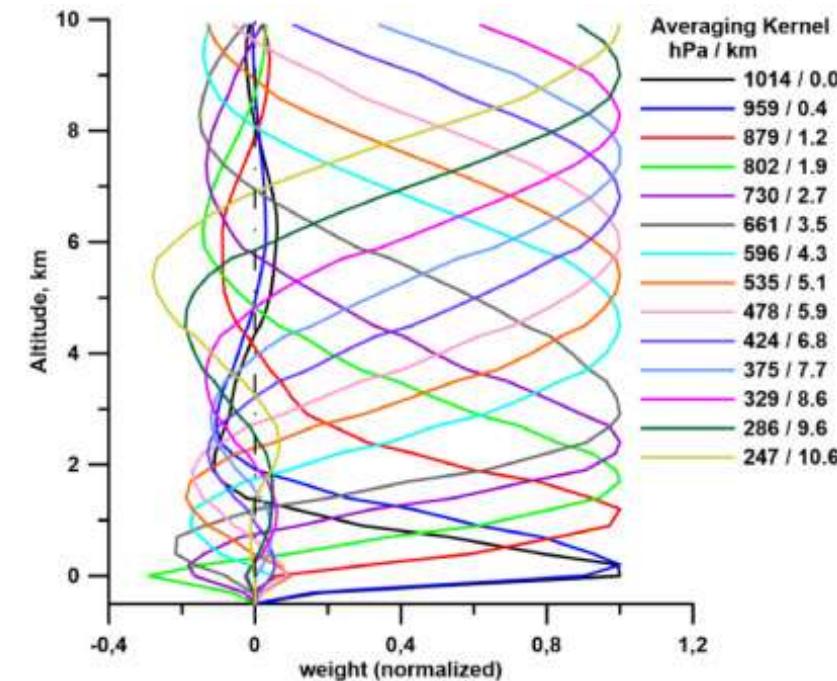

GEO-XO Instruments and orbits under consideration

3. Hyperspectral IR Sounder in Geostationary Orbit

- Variations on sounder designs being studied now
- Would likely have hundreds to thousands of channels, improving vertical resolution of temp/WV profile retrievals
- Some OSSE studies underway to estimate benefit to NWP

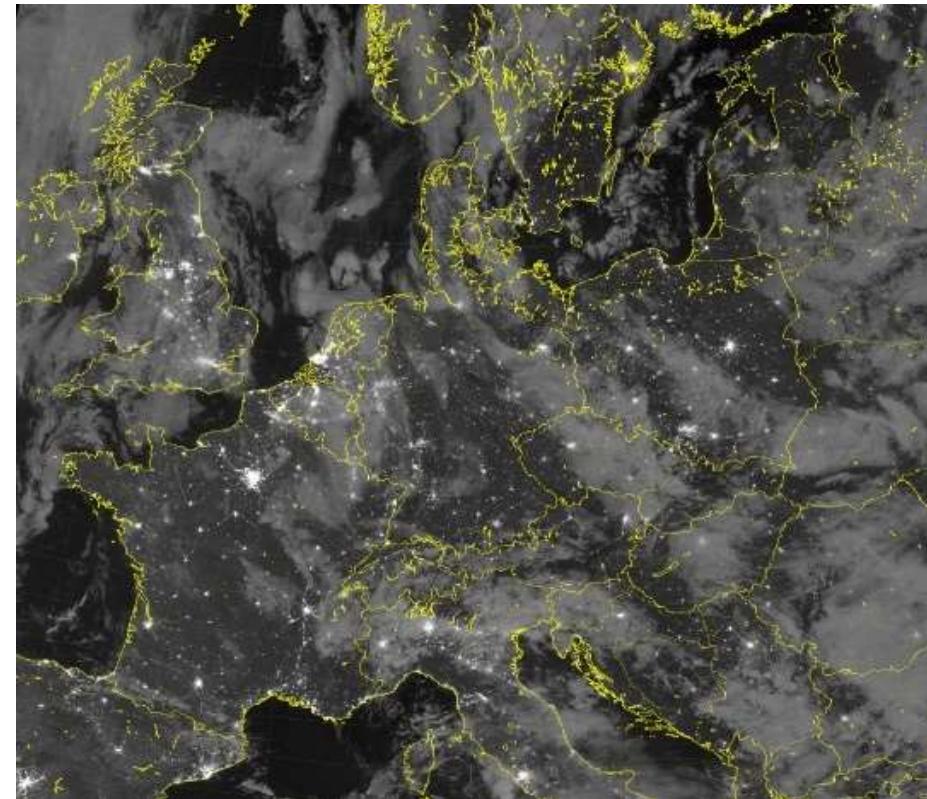

GEO-XO Instruments and orbits under consideration

4. “Day Night Band” in Geostationary Orbit

- Would be similar to the VIIRS DNB, except with GEO latency and looping capability
- Useful for nighttime detection of low clouds, smoke, and other capabilities unique to visible imagery

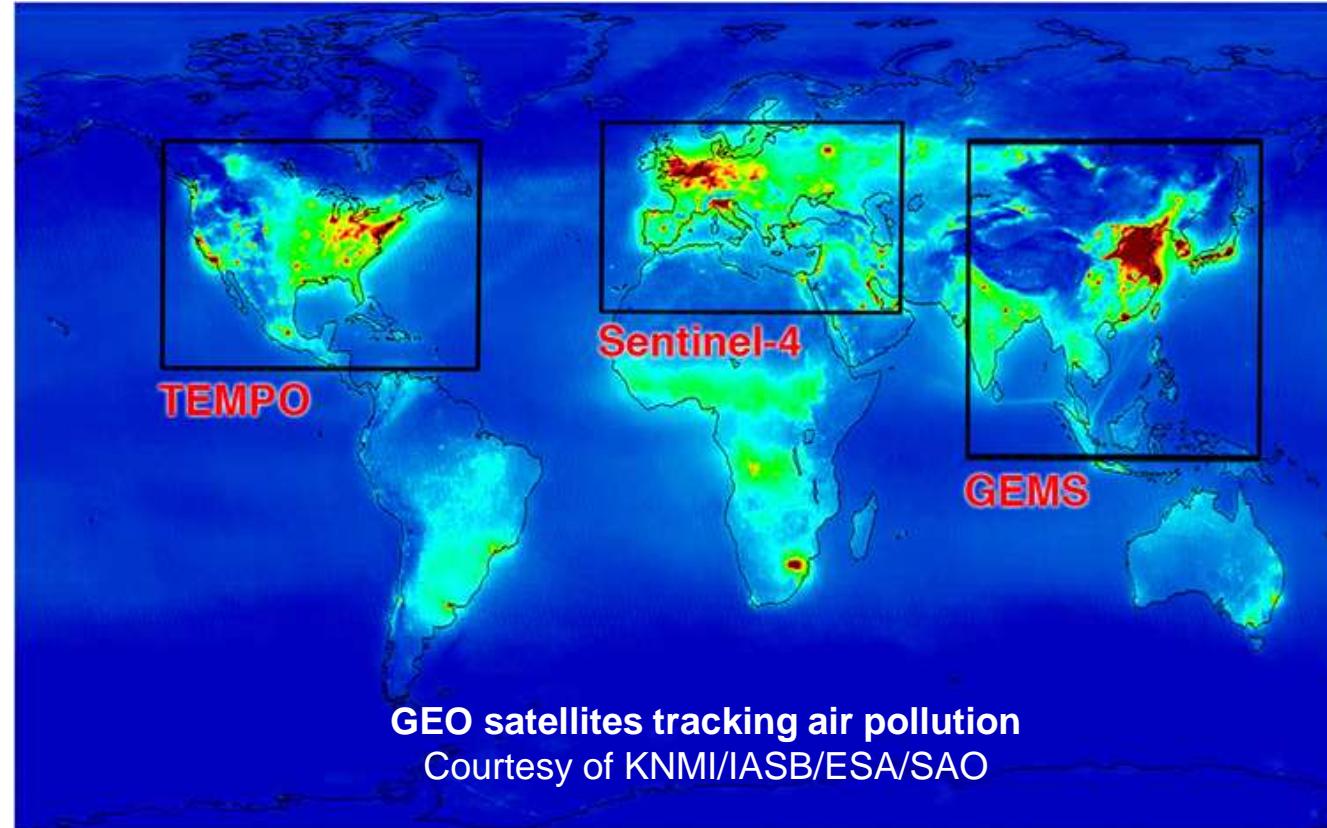

GEO-XO Instruments and orbits under consideration

5. Atmospheric Composition in Geostationary Orbit

- Perhaps similar to the NASA TEMPO instrument (a UV/VIS spectrometer) scheduled for launch in a few years
- Would allow for diurnal monitoring of atmospheric constituents

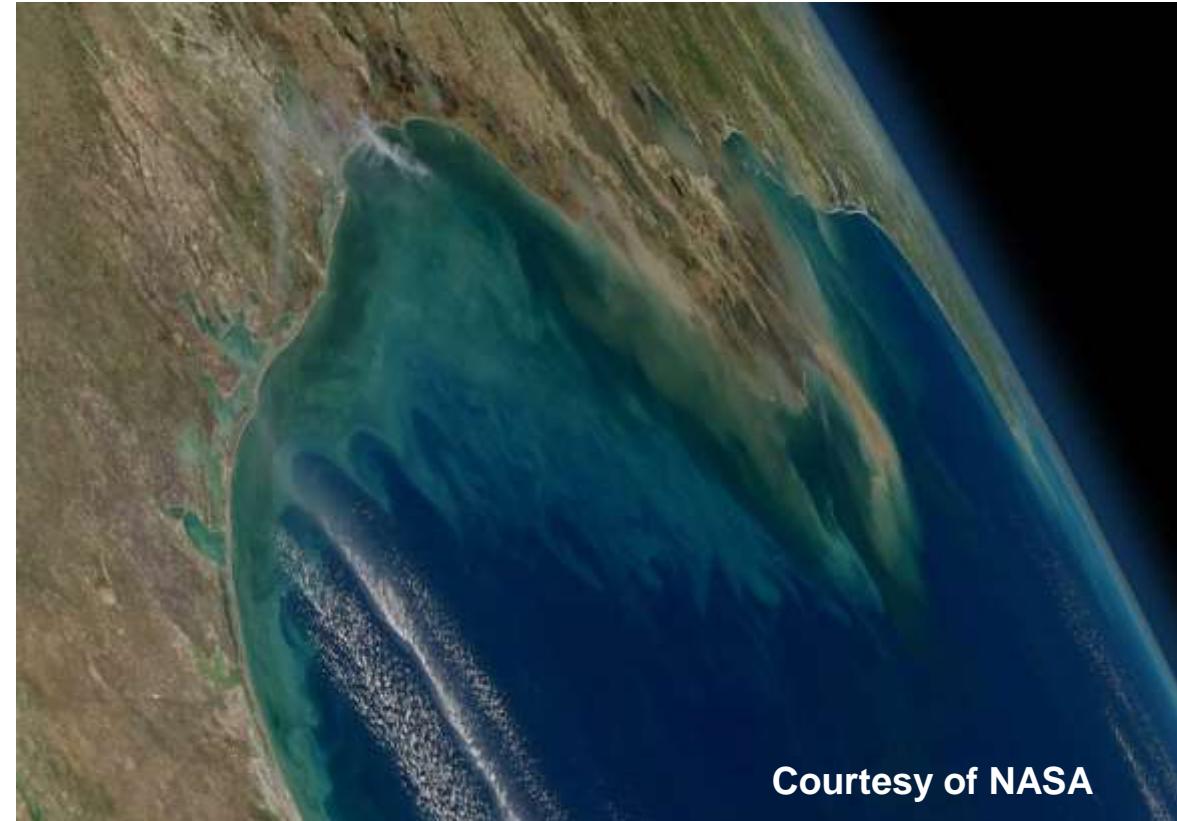

GEO-XO Instruments and orbits under consideration

6. Ocean Color in Geostationary Orbit

- Perhaps similar to the NASA GLIMR instrument, to launch in the latter half of the 2020s
- Would allow for diurnal monitoring of ocean color

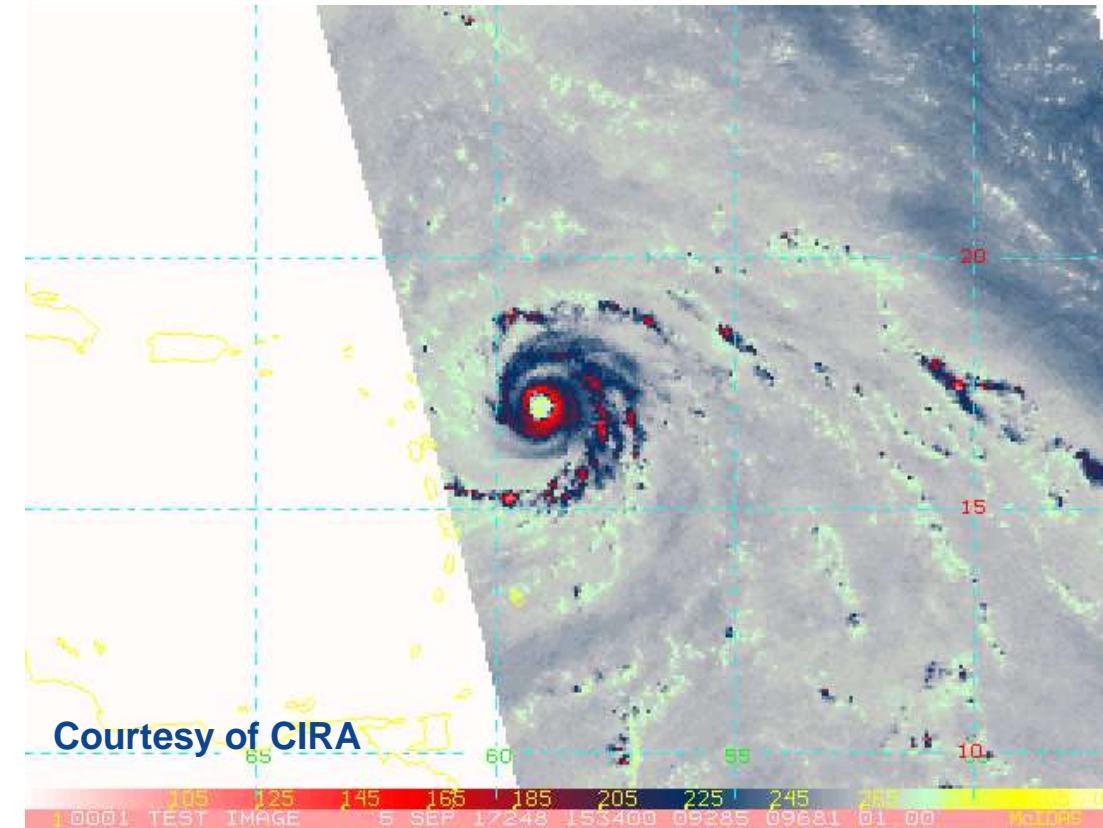

GEO-XO Instruments and orbits under consideration

7. Microwave in Geostationary Orbit

- Looking at both microwave sounder and imager
- Due to required antenna size, lowest frequency observations not feasible
- Limitations in spatial resolution relative to LEO

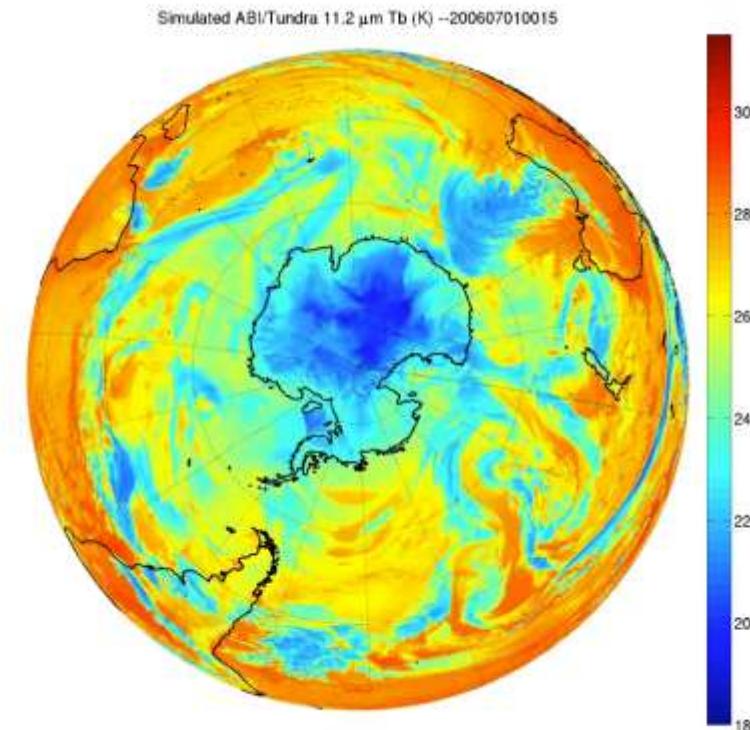

GEO-XO Instruments and orbits under consideration

8. Tundra Orbit

- Looking at an ABI-like imager and/or an Atmospheric Composition instrument in this orbit
- Would allow for improved observations over the Arctic

Sample of Constellations under Study

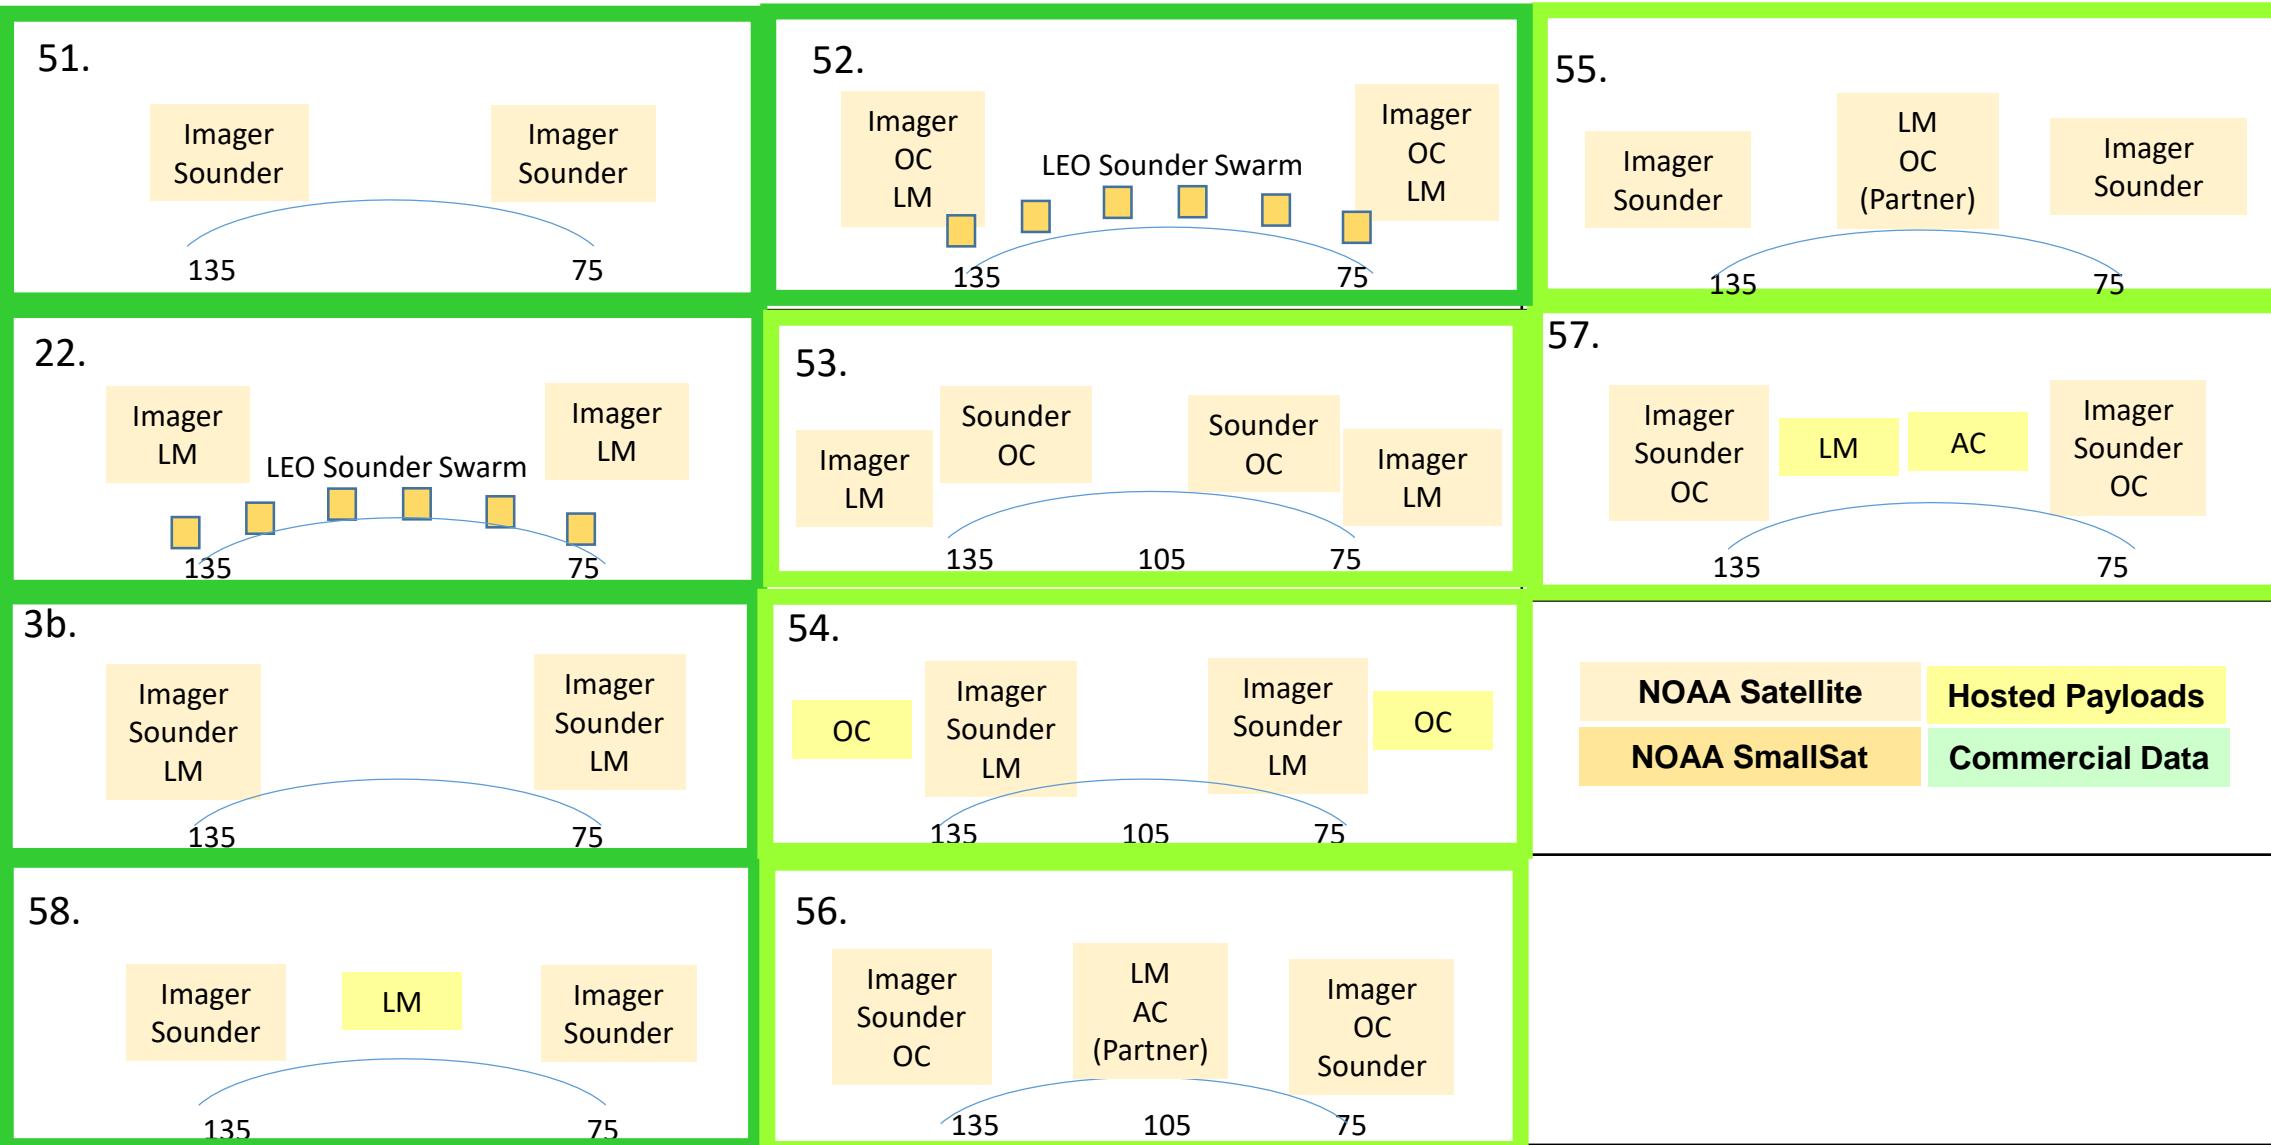

Key:

NOAA Satellite	Hosted Payloads
NOAA SmallSat	Commercial Data

Narrowed constellation options (not necessarily the final list)

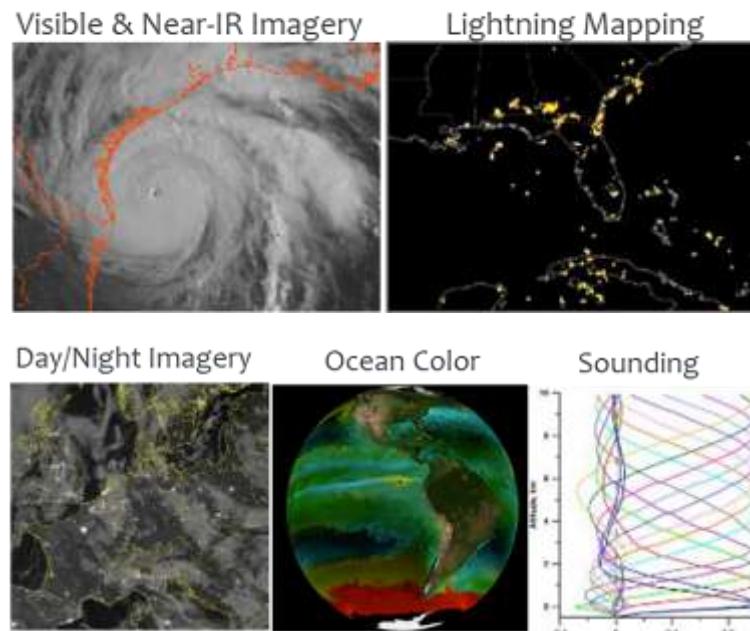

GEO-XO – What's Next?

- XORWG will use information gathered from instrument value assessments, user workshops, and industry/program studies to deliver a set of recommended instruments/constellation in mid-November 2020
- GEO-XO Mission Concept Review (MCR) will occur in March 2021
- System Requirements Review (SRR) in 2022
- System Preliminary Design Review in 2025
- First GEO-XO launch ~2032

Data Continuity, and Potential New Observations

We Want to Hear from You

- Join our events:
 - National Weather Association 2020 Virtual Meeting, Sep 14
 - 90min GEO-XO Listening Session – 1:00 – 2:30 pm EDT
 - Community Meeting on NOAA Satellites, Sep 29 – Oct 2
 - Future plans for GEO, LEO, and Space Weather
- Contact me with comments or concerns
 - Dan.Lindsey@noaa.gov

Now is exactly the time to influence what your next geostationary observing system looks like
